this coherent and articulate volume summarizes work carried out in the field of theoretical signal and image processing it focuses on non linear and non parametric models for time series as well as on adaptive methods in image processing the aim of this volume is to bring together research directions in theoretical signal and imaging processing developed rather independently in electrical engineering theoretical physics mathematics and the computer sciences

time series or longitudinal data are ubiquitous in the social sciences unfortunately analysts often treat the time series properties of their data as a nuisance rather than a substantively meaningful dynamic process to be modeled and interpreted time series analysis for the social sciences provides accessible up to date instruction and examples of the core methods in time series econometrics janet m box steffensmeier john r freeman jon c pevehouse and matthew p hitt cover a wide range of topics including arima models time series regression unit root diagnosis vector autoregressive models error correction models intervention models fractional integration arch models structural breaks and forecasting this book is aimed at researchers and graduate students who have taken at least one course in multivariate regression examples are drawn from several areas of social science including political behavior elections international conflict criminology and comparative political economy
